

S-LOK ${ }^{\circ}$ Tube Fittings have been designed specifically for the many demanding applications such as chemical, petroleum, power generating, pulp and paper, and various types of manufacturing industries. They provide a highly reliable, leak proof and torque free seal on all tubing connections. S-LOK Tube Fittings are commonly used on instrumentation, process and control systems where high quality tube fittings are required.

## INTRODUCTION OF S-LOK TUBE FITTING

S-LOK tube fittings are manufactured under very strict quality control to assure maximum reliable performance. S-LOK tube fittings require no special tools assembly. Connections can be quickly and easily made by simple insertion and tightening the nuts.
S-LOK tube fitting has been specifically designed for use on instrumentation, process and control systems and equipment employed in chemical, petroleum, power generating and pulp and paper plants. S-LOK tube fittings could also be used in extensive applications of other fields where very high quality tube fittings are required.

## CONSTRUCTION OF S-LOK TUBE FITTINGS

S-LOK tube fittings are composed of four precision parts; body, nut,front ferrule and back ferrule.
By screwing the nut onto the body, the nut is tightened against the tapered area of the body, and its edge is compressed tightly against the tube by curling inward. The back ferrule is also located between the body and nut. As the front ferrule rolls, the back ferrule rolls up and bites into the tube resulting in the connection of tube and the fitting as well as a non-leakage effect.

The twin ferrule design achieves the leak proof sealing by assembly motion being transmitted axially through the tubing. This results in no radial movement of the tubing upon assembly. Therefore, the tube is not stressed and the mechanical integrity is maintained. This is the result of close monitoring of tolerance control in machining, and surface smoothness and hardness of each and every part of S-LOK tube fittings. Through this swaging action, S-LOK tube fittings are mechanically integrated with the tube connected.

## FITTING MATERIALS

S-LOK tube fittings are made of 316 stainless steel (S316), brass and alloy steel such as monel or others.

## SUITABLE TUBING MATERIALS

S-LOK tube fittings can be used with the following tube specifications.
Stainless steel tube;
a. TP304 and TP316 of ASTM A269 or A213, or equivalent.
b. SUS304TP and SUS316TP of JIS G3459 or equivalent.
c. The wall thickness selection should be based on the operation pressure, temperature and shock conditions. Fully annealed tubing is recommended. Stainless steel tubing with the hardness of Rockwell B90 or less should be used.
d. Specific recommendation-See Table 1.(page 5)

## Tubing

Suitable tube selection is essential in performance of tubing system. For safe, reliable and leak-free seals tubing should be considered as a fitting component. S-LOK tube fittings perform best when good quality tubing is used. When selecting tubing material including size and wall thickness, customer must consider pressure, flow, temperature, environment and compatibility of system.

- General Rules.

1. For leak-free sealing, the tubing surface is very important. The tubing must have a good surface condition with free of scratches, draw mark, flat spots or dirt.
2. In case of welded tubing, it should not have a visible poor bead on its surface.
3. Tubing and fitting material is essential for the thermal compatibility and corrosion resistance.

The material should be compatible with the processing fluid, the temperature and the environment.
4. Tubing must be softer than fitting material. When tubing and fittings are made of the same material, the metal tubing must be fully annealed.
5. Tubing hardness must be selected according to the information in the table 2 to 4 .
6. Do not select a too thin or too thick wall. A too thin wall may collapse, and a too thick wall may not properly be deformed by the ferrule action. Selecting the wall's thickness should be based on the applicable pressure, temperature, shock and vibration.

- Consider the following in selecting tube.

1. Quality of the tubing material and manufacturing method.
2. Hardness of tube.
3. Surface treatment of tube.
4. O.D and tolerance.
5. Wall thickness and tolerance.
6. Concentricity of tube.
7. Ovality. (Shape)

## Tubing Temperature Ranges

The maximum and minimum operating temperatures for various tubing material.

| Tubing Material | Temperature Range |
| :--- | :--- |
| Stainless Steel 316 | $-321^{\circ} \mathrm{F}$ to $1200^{\circ} \mathrm{F}\left(-196^{\circ} \mathrm{C}\right.$ to $\left.649^{\circ} \mathrm{C}\right)$ |
| Carbon Steel | $-65^{\circ} \mathrm{F}$ to $799^{\circ} \mathrm{F}\left(-53^{\circ} \mathrm{C}\right.$ to $\left.426^{\circ} \mathrm{C}\right)$ |
| Copper | $-40^{\circ} \mathrm{F}$ to $400^{\circ} \mathrm{F}\left(-40^{\circ} \mathrm{C}\right.$ to $\left.205^{\circ} \mathrm{C}\right)$ |
| Alloy 400 | $-324^{\circ} \mathrm{F}$ to $800^{\circ} \mathrm{F}\left(-198^{\circ} \mathrm{C}\right.$ to $\left.427^{\circ} \mathrm{C}\right)$ |
| Alloy C276 | $-320^{\circ} \mathrm{F}$ to $1000^{\circ} \mathrm{F}\left(-195^{\circ} \mathrm{C}\right.$ to $\left.537^{\circ} \mathrm{C}\right)$ |
| Alloy 600 | $-205^{\circ} \mathrm{F}$ to $1200^{\circ} \mathrm{F}\left(-130^{\circ} \mathrm{C}\right.$ to $\left.648^{\circ} \mathrm{C}\right)$ |
| Titanium | $-320^{\circ} \mathrm{F}$ to $600^{\circ} \mathrm{F}\left(-195^{\circ} \mathrm{C}\right.$ to $\left.315^{\circ} \mathrm{C}\right)$ |
| PTFE | $0^{\circ} \mathrm{F}$ to $150^{\circ} \mathrm{F}\left(-17^{\circ} \mathrm{C}\right.$ to $\left.65^{\circ} \mathrm{C}\right)$ |

Allowable Working Temperature
When Elastomer seal is used in the fitting,care must be taken for allowable working temperature. See working temperature below.

| Elastomer seal material | Working Temperature |
| :--- | :--- |
| NBR (e. g. Perbunan $\left.{ }^{\circledR}\right)$ | $-35^{\circ} \mathrm{C}$ to $110^{\circ} \mathrm{C}\left(-40^{\circ} \mathrm{F}\right.$ to $\left.230^{\circ} \mathrm{F}\right)$ |
| FKM (e. g. Viton $\left.{ }^{\circledR}\right)$ | $-28^{\circ} \mathrm{C}$ to $204^{\circ} \mathrm{C}\left(-20^{\circ} \mathrm{F}\right.$ to $\left.400^{\circ} \mathrm{F}\right)$ |
| PTFE (e.g. Teflon $\left.{ }^{\circledR}\right)$ | $-60^{\circ} \mathrm{C}$ to $240^{\circ} \mathrm{C}\left(-76^{\circ} \mathrm{F}\right.$ to $\left.464^{\circ} \mathrm{F}\right)$ |

## Temperature De-rating Factors

The allowable working pressure is determined by various temperatures.
To determine the working pressure at the specific temperatures, multiply the working pressure at ambient temperature shown in table 2~4 by the factor shown in table1.

Example : Tube S316 3/8 O.D. x $0.035^{\prime \prime}$ at $700^{\circ} \mathrm{F}$.
$3.300 \mathrm{psi} \times 0.82=2.706 \mathrm{psi}$
Therefore 2.706 psi is the maximum allowable working pressure of S316 3/8" O.D x $0.035^{\prime \prime}$ wall tubing.

-Pressure calculations are based on Maximum O.D and minimum wall thickness, and no allowance is made for corrosion and erosion.
e.g. ASTM A269 1/2 O.D $\times 0.035^{\prime \prime}$ O.D tolerance $\pm 0.005^{\prime \prime}$, W.T. $\pm 10 \%$. Calculations are based on 0.050 " O.D x $0.035^{\prime \prime}$ W.T.
-To determine bar, Multiply psig by 0.0689 . To determine kPa, multiply psig 6.89 .
-To convert bar to psig, multiply bar by 14.51
-For working pressure of ASME B31.1, multiply the above value by 0.94

## Welded stainless steel Tubing

Based on ASME B31.3 for weld integrity, a de-rating factor must be applied to welded tubing.
For double butt seam tubing, multiply by 0.85
For single butt seam tubing, multiply by 0.80 .

## Special Alloy Tubing

When special alloy tubing is selected, we recommend:
Fully annealed seamless (or welded and cold-drawn, where permitted) alloy tubing to the ASTM specification as shown below. Tubing should be free of scratches for bending or flaring.

| S-LOK material <br> Designator | Tube Material | ASTM Number | Tubing |  |
| :---: | :--- | :---: | :--- | :---: |
|  |  |  | Maximum hardness |  |

| A 600 | Alloy 600 | B167 | Seamless | HRB 92 |
| Ti | Titanium-Grade2 | B338 | Seamless or Welded | - |

Pressure Rating Equivalents:

1) $1 \mathrm{bar}=100 \mathrm{kPa}=14.51 \mathrm{psi}$
2) $1 \mathrm{kPa}=0.01 \mathrm{bar}=0.1451 \mathrm{psi}$
3) $1 \mathrm{psi}=0.069 \mathrm{bar}=6.89 \mathrm{kPa}$
4) $1 \mathrm{~kg} / \mathrm{cm}^{2}=0.98 \mathrm{bar}=14.22 \mathrm{psi}$

## Tubing for Gas application

S-LOK tube fittings are designed for a wide range of leak-free application including gas leak proof and vacuum service. Gases can escape even the most minute leakpath due to their small molecules. Tube must therefore be carefully handled not to get scratched.
Use heavier wall tubing for gas service. Heavy wall tubing resists ferrule action by coining out minor defects of the tube surface, and thin wall tubes may collapse with little resistance to ferrule action.
For gas service, use the tubing of the un-shadowed section in table 2-4

## Cryogenic Service

S-LOK fittings in 316 stainless steel provide highly reliable performance from cryogenic temperatures to high temperature levels. 316 stainless steel temperature range : $-321^{\circ} \mathrm{F}$ to $1200^{\circ} \mathrm{F}\left(-196^{\circ} \mathrm{C}\right.$ to $\left.649^{\circ} \mathrm{C}\right)$
Cryogenic temperature are considered to be temperatures below : $-100^{\circ} \mathrm{F}\left(-73^{\circ} \mathrm{C}\right)$

## Pipe Thread

Many S-LOK tube fittings have a male or female pipe end.
These ends occasionally have a lower pressure rating than the pressure rating of the tube fitting end so consider both of the ratings.

- The ratings shown above are based on ASME B31.3-1999
- Female pipe ends have lower ratings than male pipe in a given size due to the inner and outer diameters of female threads being larger than those of male pipe ends.
- The ratings shown above are reference only.

## Pipe Thread Sealant

Pipe thread sealant is essential to ensure leak-free seal.
Since the PTFE tape is commonly used, we provide information of recommended tape width, as well as the numbers of thread to be wrapped. The PTFE tape fills the voids between threads and prevents galling on pipe threads. The sealant usually contains a lubricant.

## Note

1. Wrap PTFE tape clockwise from first thread. Do not overhang the first thread, as the tape may get into the fluid system. 2. PTFE tape has a temperature limit of $230^{\circ} \mathrm{C}\left(450^{\circ} \mathrm{F}\right)$

## S-LOK Tube Fitting Instruction Manual

## Installation Instruction

Fully insert the tube into the fitting and against the shoulder; tight the nut by finger-tightening. (Caution : The tube may be elliptical or have burrs; foreign material on the surface and/or inside of the tube fitting).

Mark the nut at the 6 o'clock position before placing the spanner.

While holding the fitting body steady, tight the nut with the spanner by turning one and one-quarter ( $11 / 4$ ) clockwise. Make sure that the spanner's starting point at 6 o'clock is being positioned at 9 o'clock after tightening $11 / 4$ clockwise. Tighten the nut only $3 / 4$ turn to the 3 o'clock position for $1 / 16$, $1 / 8$ and $3 / 16$ inch ( $2 \mathrm{~mm}, 3 \mathrm{~mm}$ and 4 mm ) size tube fittings. When it was tightened $11 / 4$ turn clockwise, the tube fitting has been designed to be endurable even from the bursting pressure of the tube, therefore insufficient tightening against the regulation may cause the leakage and bursting while over-tightening makes the reassembly difficult due to deformity.

## Gageability

Gap Inspection Gage assures the installer or the inspector that the instrument has been sufficiently tightened during the first installation inspection.
Place Gap Inspection Gage at the gap between the nut and body.
-When the gage does not fit into the gap, it means that the fitting is sufficiently tightened.
-When the gage fits into the gap, it means that it needs to be tightened more.

## Reassembly Instruction

S-LOK products can be disassembled and reassembled numerously.
For reassembly, insert the tube with ferrules into the fitting until the front ferrule seats against the fitting body to avoid any damage from foreign objects at the disassembled area. After hand-tightening the nut while holding the fitting's body steady, tight the nut with a spanner to the previously pulled-up position. At this point, you would feel a significant increase in resistance. Then tight the nut slightly.

## Proper Tube Handling

Good handling practices can greatly save the good surface finish of the supplied tube．
－Tubing should never be dragged out of a tubing rack．
－Tubing should never be dragged across cement，asphalt，gravel or any other rough surface．
－Tubing cutter wheel and hacksaw blade should always be sharp．
－Try not to take deep cuts with each turn of the cutter or stroke of the saw．
－Tube end should always be deburred．
．Tubing should be stored to avoid collection of dirt and contamination．
－If possible，tubing ends should be plugged，so any foreign materials will not fall inside．

## Tube bending

For sealing installation in case of bended tubing being near S－LOK fittings，there should be enough lineal distance from bending point to the fittings．When tube bend is too close to the fitting，the deformed section of the bend may enter the fitting，and it may result in leaking．Also，the bending radius should not be too short of bending radius may affect the working pressure and may cause insufficient flow．Minimum bending radius is usually recommended by the tube bending manufacturer．

## Thermocouple Connector SMCT

S-LOK thermocouple connector has no shoulder nor sizing angle inside the fitting; the features enable thermocoupler to go through the fitting's thread end.

Example : SMCT 8-8N-S for ordering Thermocouple connector O.D $1 / 2^{\prime \prime} \times 1 / 2^{\prime \prime}$ NPT S316.

## Assembly Instructions

1. Position the length of the Thermocouple passed through fitting's thread end and hold it to prevent shifting during assembly
2. Turn the nut 1-1/4 after finger tight with a wrench by holding the body with a back up wrench for size $1 / 4^{\prime \prime}(6 \mathrm{~mm})$ or above.

## ISO Pipe Thread

The International Standards Organization created the ISO 228/1 and 7/1 threads to standardize the nomenclature of several international pipe threads.

## ISO 228/1

The ISO $228 / 1$ is a parallel thread that is no sealing threads. The pressure tight seal is usually made metal to metal against the female port or with a gasket.

The ISO 228/1 is described in following codes.

1. BS 2779 (BSPP)
2. DIN-ISO 228/1
3. JIS B0202
(PF)
4. ISO 228/1

The ISO 228/1 threads sealing available in S-LOK are listed below.

Sealing by compression against face of body Reference DIN 3852 Type A

A self-centering taper is constructed at the hex. This taper centers a bonded washer to seal to the surface surrounding the female thread.

SGB Bonded Seal Gasket
(Buna inner ring bonded to carbon steel outer ring)

A metal gasket performs the sealing between the reverse bevel of the fitting and the face of the female threaded component.

A gasket is dropped into the flat bottom of the female thread. The face of the male thread exerts a load on the gasket to seal.

## ISO 7/1

The ISO $7 / 1$ is a tapered thread that is sealing threads working by interference fit. This still requires thread sealant for pressure-tight seal by filling the voids between threads, and further, this prevents galling on piping threads. The sealant usually contains a lubricant.
The ISO $7 / 1$ is described in following codes.

1. BS 21 (BSPT) 2. JIS B0203 (PT) 3. ISO 7/1 4. DIN 2999 (male thread only )

The ISO 7/1 looks similar to the NPT thread. See how different they are as illustrated below.

ISO 7/1 tapered pipe thread

*55 ${ }^{\circ}$ thread angle *Pitch measured in millimeters *Truncation of root and crest are round *Taper angle $1^{\circ} 47^{\prime}$

NPT tapered pipe threads

* $60^{\circ}$ thread angle
*Pitch measured in Inches
*Truncation of root and crest are flat
*Taper angle $1^{\circ} 47{ }^{\prime}$

## S-LOK Adapter eliminates alignment problems

In the direction shown the female port is required to connect with tubing.

The male elbow is positioning in the wrong direction.

To eliminate the problem, use a male adapter into the female port.

Connect a union elbow to the adapter by tightening the S-LOK port with a wrench while holding the elbow wrench pad in the desired direction

## Connects two fractional S-LOK ports

## Port Connector SCP

## Installation Instructions

1. Remove the nut and ferrules from S-LOK port 1 and set nut only (no ferrules) over the port connector
2. Tighten the nut with wrench until sharp rise in torque is felt
3. Insert the other end of port connector into port 2 and tighten nut 1-1/4 turns with wrench.
for $1 / 8^{\prime \prime}, 3 \mathrm{~mm}$ only $3 / 4$ turn from finger tight.

## SAE Fittings

S-LOK SAE straight O-Ring seal fittings are of positionable feature and provide connection tube to straight thread boss. Further this has an advantage of eliminating welding and brazing process when used as bulkhead fitting on thin wall tanks or vessels.
These fittings are designed and manufactured to SAE standards as below:
Male or external fitting end dimensions to SAE J514
Straight thread to SAE J475 (equivalent to ANSI B1,1 or ISO R725)
Female or internal straight thread boss to SAEJ1926. See diagram below.

a. Diameter $U$ shall be concentric with the thread pitch diameter within 0.13 full indicator reading (FIR) and shall be free from longitudinal and spiral tool marks. Annular tool marks up to 2.5 micro meters max. shall be permissble.
b. This is the maximum recommended spotface depth to permit sufficient wrench grip for the proper tightening of the fitting or locknut.
c. If the face of the boss is on a machined surface, dimensions $Y$ and $S$ need not apply as long as $R 0.25 / 0.375$ is maintained to avoid damage to the O-Ring during installaton.
d. Tap drill depths given require the use of bottoming taps to produce the specified full thread lengths. Where standard taps are used, the tap drill depths must be increased accordingly.

## Installation Instruction

Step 1. Ensure the locknut is fully raised.
Step 2. Lubricate the O-Ring with a light oil or petroleum and turn the fitting into the straight thread boss until the metal washer is in contact with the boss.

Step 3. Position the fitting by backing it out (not more than 1turn counter-clockwise) until the S-LOK fitting is oriented in the desired direction.

Step 4. With a back up wrench, hold the wrench pad and tighten the locknut until the washer is set against the face of the boss.

## O-Seal Connector

S-LOK O-ring seal fittings provide leak-tight sealing on both vacuum and high pressure with a smooth \& flat surface perpendicular to the threaded port to ensure metal to metal contact.
The standard Buna N O-ring is contained in a precision groove to prevent O-ring extrusion at high pressure and for a controlled squeeze in a vacuum service.

When installing an O-ring seal fitting:

1. Hand-tighten it until the squeeze on the O-ring can be felt during the last $1 / 4$ turn
2. Snug the fitting lightly with a wrench

## When connecting \& disconnecting the tubing to the O-ring fitting:

1. Use a back-up wrench on the fitting hex so it does not turn while the nut is being tightened at the tubing connection.
2. When disconnecting the tubing also use a back-up wrench so the fitting does not turn
3. For a recessed port, use a thin back-up wrench (1/8") to hold the fitting hex (Fig. 3).

## S-LOK Welding information

S-LOK weld ends are constructed to Schedule 80 wall or greater.
The first step is to remove the nut and ferrules from the S-LOK fitting to protect them from weld heat and cover the threads with a protective device(i.e. another nut or a plug)SP to protect the S-LOK port threads \& sealing surface from weld spatter. Only finger-tighten the protective device so that you can use it many times.
The second step is to tack weld at four positions $90^{\circ}$ apart to hold the fitting in place to ensure alignment and concentricity of the components, then complete the weld.

## Installation Instructions

The S-LOK Tube Insert supports the soft plastic tubing, thus the tubing does not collapse when the ferrules deform it. When you select a size of Tube Insert, check if the tubing O.D. and I. D. conform to those of the tube insert.
